Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the population of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises et les administrations canadiennes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Preface

This publication is part of The Nation series, a collection of 24 reports containing basic information on a broad range of questions from the 1991 Census of population.

The first four publications in the series present data which were collected from every household in Canada. These data concern demographic, family, household, dwelling, and mother tongue characteristics. The remaining 20 publications contain data collected from a 20% sample of households, and include statistics on demographic, social, cultural and economic characteristics. The geographic coverage in these publications is primarily at the national, provincial and territorial levels, although some data are provided for large metropolitan areas.

Additional statistics on the subjects covered in these publications will be available in other data products, such as the Profiles series, the Dimensions series, Aboriginal Peoples products, Basic Summary Tabulations and Public Use Microdata Files. Together, the products and services from the 1991 Census provide a complete set of current information about Canada and Canadians.

I would like to express my appreciation to the millions of Canadians who completed their questionnaires on June 4, 1991, as well as to all those who assisted Statistics Canada in planning and conducting the census.

Ivan P. Fellegi
Chief Statistician of Canada

Préface

La présente publication fait partie de la série «Le pays» qui comprend 24 bulletins dans lesquels se retrouvent des renseignements de base sur un large éventail de questions posées au recensement de la population de 1991.

Les quatre premières publications de la série présentent les données qui ont été recueillies auprès de tous les ménages du Canada. Ces données portent sur des caractéristiques relatives à la démographie, à la famille, au ménage, au logement et à la langue maternelle. Les 20 autres publications contiennent des données recueillies auprès d'un échantillon formé de 20 % des ménages et renferment des statistiques sur des caractéristiques démographiques, sociales, culturelles et économiques. Ces publications présentent surtout des données à l'échelle du Canada, des provinces et des territoires, mais on y trouve également certaines données pour les grandes régions métropolitaines.

Des statistiques supplémentaires sur les sujets traités dans ces publications seront disponibles dans d'autres produits de données tels que les séries «Profils» et «Dimensions», les produits sur les autochtones, les tableaux sommaires de base et les fichiers de microdonnées à grande diffusion. Ensemble, les produits et services du recensement de 1991 procurent des informations récentes et complètes sur le Canada et sa population.

J'aimerais exprimer ma reconnaissance aux millions de Canadiens et Canadiennes qui ont rempli leurs questionnaires le 4 juin 1991 et à tous ceux et celles qui nous ont prêté leur concours en travaillant à la planification et à la réalisation du recensement.

Le statisticien en chef du Canada
Ivan P. Fellegi

Highlights

All Employment Income Recipients

- Between 1985 and 1990, the number of individuals aged 15 and older with employment income (that is, wages and salaries and income from farm or non-farm self-employment) increased by 14.0% to 14.9 million. The rate of increase in the number of female earners (19.6%) was twice that of male earners (9.7%).
- After adjustment for inflation, the overall average employment income increased by 4.3% from \$23,319 in 1985 to \$24,329 in 1990. Average earnings of men increased by 3.2% to \$29,847 in 1990, while women's average earnings rose by 10.6% to \$17,751.
- Average employment income in 1990 was highest in the Northwest Territories (\$27,234), followed by Ontario (\$26,454). It was lowest in Prince Edward Island (\$17,711) and in Newfoundland (\$18,098).
- Between 1985 and 1990, the change in inflation-adjusted average employment income of individuals in various provinces and territories differed substantially. Average earnings fell by 3.9% in Saskatchewan and by 1.2% in Alberta; they rose by 9.7% in the Yukon and by 9.3% in Prince Edward Island.
- Average earnings rose in all major occupations except for a small decline in average employment income in managerial and administrative occupations.

Full-year, Full-time Workers

- Of the 14.9 million individuals who reported employment income for 1990, 51.8% worked full year, full time (49 to 52 weeks in 1985 or 1990, mostly full time). While the number of men who worked full year, full time increased by 11%, the increase for women was significantly higher at 29%. Consequently, the proportion of women among all full-year, full-time workers increased from 35% in 1985 to 39% in 1990.
- Compared with \$33,337 in 1985, the average earnings of full-year, full-time workers were \$33,714 in 1990, a gain of only 1.1% in the five years. Average earnings of women increased by 4.6% to \$26,033 in 1990, compared with a 1.8% increase to \$38,648 for men.
- Average earnings in 12 of the 22 major occupation groups increased and in 10 groups declined. Both increases and decreases were quite small.

Faits saillants

Tous les bénéficiaires d'un revenu d'emploi

- De 1985 à 1990, le nombre de personnes de 15 ans et plus ayant un revenu d'emploi (c'est-à-dire les salaires et traitements et le revenu de travail autonome agricole et non agricole) s'est accru de 14 % pour atteindre 14,9 millions. Le taux de croissance du nombre de femmes bénéficiaires d'un revenu (19,6 %) était le double de celui des hommes (9,7 %).
- Après ajustement en fonction de l'inflation, l'ensemble du revenu moyen d'emploi a augmenté de 4,3 %, pour passer de 23 319 \$ en 1985 à 24 329 \$ en 1990. Les gains moyens chez les hommes se sont accrus de 3,2 %, pour passer à 29 847 \$ en 1990, alors que les gains moyens chez les femmes ont augmenté de 10,6 %, pour atteindre 17 751 \$.
- Le revenu moyen d'emploi en 1990 était le plus élevé dans les Territoires du Nord-Ouest (27 234 \$) et en Ontario (26 454 \$). Il était le plus faible à l'Île-du-Prince-Édouard (17 711 \$) et à Terre-Neuve (18 098 \$).
- De 1985 à 1990, la variation du revenu moyen d'emploi après ajustement en fonction de l'inflation différait considérablement selon les provinces et les territoires. Les gains moyens ont diminué de 3,9 % en Saskatchewan et de 1,2 % en Alberta; ils ont augmenté de 9,7 % au Yukon et de 9,3 % à l'Île-du-Prince-Édouard.
- Les gains moyens se sont accrus dans toutes les principales professions, à l'exception d'une faible baisse du revenu moyen d'emploi au sein des professions du groupe directeurs, gérants, administrateurs.

Travailleurs à plein temps toute l'année

- Parmi les 14,9 millions de personnes qui ont déclaré un revenu d'emploi en 1990, 51,8 % avaient travaillé toute l'année, à plein temps (49 à 52 semaines en 1985 ou 1990, surtout à plein temps). Le nombre d'hommes qui travaillaient à temps plein toute l'année s'est accru de 11 %, mais l'augmentation chez les femmes était beaucoup plus élevée (29 %). Par conséquent, la proportion de femmes parmi les travailleurs à plein temps toute l'année s'est accrue, pour passer de 35 % en 1985 à 39 % en 1990.
- Comparativement à 33 337 \$ en 1985, les gains moyens des travailleurs à plein temps toute l'année étaient de 33 714 \$ en 1990, une augmentation de seulement 1,1 % en cinq ans. Les gains moyens chez les femmes ont augmenté de 4,6 % pour passer à 26 033 \$ en 1990, comparativement chez les hommes à une augmentation de 1,8 % (38 648 \$).
- Les gains moyens ont augmenté au sein de 12 des 22 principaux groupes de professions et ils ont diminué dans 10. Ces hausses et ces baisses étaient petites.

- The ratio of female to male average earnings for full-year, full-time workers rose from 65.5% in 1985 to 67.4% in 1990. The ratio ranged from 50.9% in Medicine and health occupations to 79.3% in Mining and quarrying occupations.
- Based on the ratio of average earnings of full-year, full-time working women to that of men for each major occupation group, the percentage of women who earned less than 60% of men's average earnings declined from 35% in 1985 to 26% in 1990. The proportion of women earning between 60% and 70% of men's earnings increased from 18% in 1985 to 28% in 1990.
- Although women accounted for 39% of all full-year, full-time workers in 1990, their proportions in certain occupation groups were much higher: Clerical (76%), Medicine and health (74%) and Teaching (57%). The respective female to male earnings ratios in these occupations were 75.4%, 50.9% and 78.3%.
- Women were more concentrated in lower paying categories within these three major occupation groups. For example, within the Medicine and health group, women accounted for 24% in Health diagnosing and treating occupations with an earnings ratio of 61.8 %, and for 87% in Nursing, therapy and related assisting occupations with an earnings ratio of 93.3%.
- Among full-year, full-time workers, judges and magistrates recorded the highest average earnings (\$102,646) in 1990, followed by physicians and surgeons (\$102,370) and dentists (\$95,776). Average income for the 10 highest paying occupations taken together was \$73,313 in 1990.
- Compared with their overall proportion of 39% among all full-year, full-time workers, women represented 20% of workers in the 10 highest paying occupations. The overall average earnings for these occupations were \$79,463 for men and \$48,609 for women in 1990.
- Average employment income of full-year, full-time workers in the 10 lowest paying occupations in 1990 was \$15,092. About 72% of these workers were women. Most of these were service occupations. The overall average earnings for these occupations were \$18,794 for men and \$13,673 for women in 1990.
- Le rapport entre le revenu moyen d'emploi des femmes et celui des hommes employés à plein temps toute l'année s'est accru de 65,5 % en 1985 à 67,4 % en 1990. Le rapport variait de 50,9 % dans les professions de médecine et santé à 79,3 % dans les professions des mineurs et carriers.
- Selon le rapport entre le revenu moyen d'emploi des femmes et celui des hommes employés à plein temps toute l'année au sein des principaux groupes de professions, le pourcentage de femmes ayant gagné moins de 60 % des gains moyens des hommes est passé de 35 % en 1985 à 26 % en 1990. La proportion des femmes qui gagnaient de 60 % à 70 % des gains des hommes a augmenté, pour passer de 18 % en 1985 à 28 % en 1990.
- Même si les femmes représentaient 39 % des travailleurs à plein temps toute l'année en 1990, leur proportion au sein de certains groupes de professions était beaucoup plus élevée : employés de bureau (76 %), médecine et santé (74 %) et enseignants (57 %). Les rapports respectifs entre les gains des femmes dans ces professions et ceux des hommes étaient de 75,4 %, de 50,9 % et de 78,3 %.
- Les femmes se retrouvaient en plus grand nombre dans les catégories les moins rémunérées à l'intérieur de ces trois grands groupes de professions. Par exemple, à l'intérieur du groupe de la médecine ou de la santé, les femmes figuraient pour 24% du personnel spécialisé dans le diagnostic et le traitement des maladies où le ratio des gains des femmes aux gains des hommes était de 61.8%, et pour 87% du personnel spécialisé et des auxiliaires des soins infirmiers et thérapeutiques, où le ratio était de 93.3%.
- Chez les travailleurs à plein temps toute l'année, les juges et magistrats ont enregistré les gains moyens les plus élevés (102 646 \$) en 1990, suivis des médecins et chirurgiens (102 370 \$) et des dentistes (95 776 \$). Le revenu moyen des 10 professions les mieux rémunérées mises ensemble atteignait 73 313 \$ en 1990.
- Comparativement à la proportion qu'elles forment parmi les travailleurs à plein temps toute l'année (39 %), les femmes représentaient 20 % des travailleurs au sein des 10 professions les mieux rémunérées. Les gains moyens d'ensemble dans ces professions étaient de 79 463 \$ chez les hommes et de 48 609 \$ chez les femmes en 1990.
- Le revenu moyen d'emploi des travailleurs à plein temps toute l'année au sein des 10 professions les moins bien rémunérées était de 15 092 \$ en 1990. Environ 72 % de ces travailleurs étaient des femmes, et la plupart des professions étaient dans les services. Les gains moyens d'ensemble dans ces professions étaient de 18 794 \$ chez les hommes et de 13 673 \$ chez les femmes en 1990.

Introduction

This publication presents information on the average employment income of the population 15 years of age and over in 1985 and 1990. The data are provided for Canada, provinces and territories, for the population working full year, full time, by sex and detailed occupation.

Organization of the Publication

This publication consists of one table as described below.

Table Description

Table 1 presents comparable average employment income statistics from the 1986 and 1991 Censuses for the population 15 years of age and over by sex and detailed occupation. The 1985 incomes were converted into 1990 dollars by adjusting for the change in the Consumer Price Index between 1985 and 1990. The statistics are presented separately for all persons with employment income and for those who worked full year, full time.

Content Considerations

Counts of the population, households, dwellings or families shown in tabulations based on 20% sample data may differ from those collected on a 100% basis for the following reasons:

- (1) **The exclusion of institutional residents:** Institutional residents are defined as those individuals other than staff members and their families who live in institutional collective dwellings such as residences for senior citizens, hospitals, correctional and penal institutions. Detailed sample data were not collected from this sector of the population.

Introduction

Cette publication présente des données sur le revenu moyen d'emploi de la population âgée de 15 ans et plus en 1985 et en 1990. Les données, qui sont ventilées à l'échelle du Canada, des provinces et des territoires, portent sur la population travaillant toute l'année à plein temps, selon le sexe et la profession détaillée.

Structure de la publication

Cette publication comporte uniquement le tableau décrit ci-après.

Description de tableau

Le **tableau 1** présente des données comparables des recensements de 1986 et de 1991 sur le revenu moyen d'emploi pour la population âgée de 15 ans et plus selon le sexe et la profession détaillée. On a converti les revenus de 1985 en dollars de 1990 en les corrigeant des effets de la variation de l'indice des prix à la consommation entre 1985 et 1990. Les statistiques sont présentées séparément pour l'ensemble des personnes ayant un revenu d'emploi et pour celles d'entre elles ayant travaillé toute l'année à plein temps.

Considérations relatives au contenu

Les chiffres de la population, des ménages, des logements ou des familles dans les totalisations utilisant les données-échantillon (20 %) peuvent différer des données intégrales pour les raisons suivantes :

- (1) **L'exclusion des pensionnaires d'un établissement institutionnel :** Ces derniers sont définis comme les personnes autres que les membres du personnel et leur famille qui vivent dans des logements collectifs institutionnels tels que les foyers pour personnes âgées, les hôpitaux, les établissements de correction et établissements pénitentiaires. On n'a pas recueilli de données-échantillon détaillées pour ce secteur de la population.

(2) **Weighting:** Data collected on a sample basis were weighted up to provide estimates of the entire population excluding institutional residents. However, weighted counts are subject to sampling variability. This means, for any given area, the weighted count may differ from that shown in tabulations containing data collected on a 100% basis. While the differences are relatively small for geographic areas with large populations, they can be greater for areas with small populations. For further information on this topic, please contact the Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 951-6940.

Users should also be aware that differences in counts may be due to the different subpopulations or universes for which the data are reported. For example, mobility data are reported for persons 5 years and over for the 5 year interval data and 1 year and over for the 1 year interval data, excluding those temporarily residing overseas; education, labour force and income data are reported for persons 15 years and over. Furthermore, data may be produced for subsets of these universes such as total labour force, employment income recipients or paid workers. Similar differences may occur in tabulations for households, dwellings or families. The **1991 Census Dictionary** (Catalogue No. 92-301E) provides more detailed information on universes or subpopulations by variable.

Some Indian reserves and Indian settlements were incompletely enumerated during the 1986 and/or 1991 Censuses (see "Special Notes"). These reserves and settlements are identified in Appendix 1.

Comparison of the 1991 Census data with data from earlier censuses is affected by a change in the definition of the 1991 Census population. Persons in Canada on student authorizations, employment authorizations, Minister's permits, and as refugee claimants were enumerated in the 1991 Census but not in previous censuses. These persons are referred to as non-permanent residents. For further information, see the "Special Notes" section.

Additional information on content considerations, definitions of terms, explanations of data quality, etc., may also be found at the end of this publication, immediately following the data tables. (This information is presented separately in English and in French sections for easier use.)

(2) **Pondération:** Les données-échantillon sont pondérées afin de fournir des estimations de la population tout entière à l'exclusion des pensionnaires d'un établissement institutionnel. Cependant, les chiffres pondérés se caractérisent par la variabilité d'échantillonnage, ce qui signifie que pour toute région donnée, le chiffre pondéré peut différer de celui qui figure dans les totalisations contenant les données intégrales. Bien que les différences soient relativement faibles pour les régions géographiques ayant de fortes populations, elles peuvent être plus importantes dans le cas des régions avec de petites populations. Pour de plus amples renseignements sur ce sujet, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada, Ottawa, Canada K1A 0T6 (613) 951-6940.

Les utilisateurs doivent également noter que les différences de chiffre peuvent s'expliquer par les diverses sous-populations ou univers pour lesquels les données sont publiées. Ainsi, les données sur la mobilité (période de 5 ans) sont publiées pour les personnes âgées de cinq ans et plus et les données sur la mobilité (période de 1 an) pour les personnes âgées de un an et plus, excluant celles qui résident temporairement outre-mer; les données sur la scolarité, la population active et le revenu ne sont déclarées que pour les personnes âgées de 15 ans et plus. De plus, des données peuvent être produites pour les sous-ensembles de ces univers tels que la population active totale, les bénéficiaires d'un revenu d'emploi ou les travailleurs rémunérés. Des différences similaires peuvent se glisser dans les totalisations pour les ménages, les logements ou les familles. Le **Dictionnaire du recensement de 1991** (n° 92-301F au catalogue) contient plus de renseignements détaillés sur les univers ou les sous-populations par variable.

Certaines réserves indiennes et établissements indiens n'ont été que partiellement dénombrés lors des recensements de 1986 et/ou de 1991 (voir «Notes spéciales»). Ces réserves et ces établissements sont indiqués à l'annexe 1.

La comparaison des données du recensement de 1991 avec celles des recensements précédents est affectée par la modification apportée à la définition de la population du recensement de 1991. Les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié ont été dénombrés au recensement de 1991, mais ne l'ont pas été aux recensements antérieurs. Ces personnes sont des résidents non permanents. Pour plus de renseignements, voir la section «Notes spéciales».

Vous trouverez également à la fin de la présente publication, immédiatement après les tableaux de données, d'autres informations sur les considérations relatives au contenu, à la définition de termes, à la qualité des données, etc. (Ces informations sont présentées séparément en français et en anglais pour en faciliter l'usage.)

Definitions

The definitions of geographic terms and census concepts are presented here in summary form only. Users should refer to the **1991 Census Dictionary** (Catalogue No. 92-301E) for the full definitions and additional remarks related to these concepts and definitions.

Age

Refers to the age at last birthday (as of the census reference date, June 4, 1991). This variable is derived from the date of birth question which asks day, month and year of birth. Persons who were unable to give the exact date of birth were asked to give the best possible estimate.

Average Employment Income

Average employment income refers to the weighted mean total employment income of a group of individuals 15 years of age and over and is calculated from unrounded data by dividing the aggregate employment income of the specified group of individuals (e.g., males, 45-54 years of age) by the number of individuals with employment income in that group.

Average employment income of individuals is calculated for those individuals who are at least 15 years of age and who have employment income (positive or negative).

Constant (1990) Dollars Income

Refers to the presentation of 1985 income statistics in terms of 1990 dollars. To convert the 1985 incomes into 1990 dollars, the 1985 values were revised upwards by the change in the consumer price index between 1985 and 1990.

Employment Income

Refers to total income received by persons 15 years of age and over during 1990 as:

Wages and Salaries

Refers to gross wages and salaries before deductions for such items as income tax, pensions, unemployment insurance, etc. Included in this source are military pay and allowances, tips, commissions and cash bonuses, as well as all types of casual earnings in the 1990 calendar year. The value of taxable allowances and benefits provided by employers, such as free lodging and free automobile use, is excluded.

Net Income from Unincorporated Non-farm Business and/or Professional Practice

Refers to net income (gross receipts minus expenses of operation such as wages, rents and depreciation) received during calendar year 1990 from the respondent's non-farm unincorporated business or professional practice. In the case of a partnership, only the respondent's share was to be reported. Also included is net income from persons baby-sitting in their own homes, operators of direct distributorships such as those selling and delivering cosmetics, as well as from free-lance activities of artists, writers, music teachers, hairdressers, dressmakers, etc.

Net Farm Self-employment Income

Refers to net income (gross receipts from farm sales minus depreciation and cost of operation) received during calendar year 1990 from the operation of a farm, either on own account or in partnership. In the case of partnerships, only the respondent's share of income was to be reported. Also included are advance, supplementary or assistance payments to farmers by federal or provincial governments. However, the value of income "in kind", such as agricultural products produced and consumed on the farm, is excluded.

Full-time or Part-time Weeks Worked

Refers to persons who worked in the reference year (the year preceding the census year). These persons were asked to report whether the weeks they worked in the reference year were full weeks (30 hours or more per week) of work or not. Persons with a part-time job for part of the year and a full-time job for another part of the year were to report the information for the job at which they worked the most weeks.

Occupation (Based on 1980 Standard Occupational Classification)

Refers to the kind of work persons were doing during the reference week, as determined by their kind of work and the description of the most important duties in their job. Data are available for persons 15 years of age and over, excluding institutional residents. If the person did not have a job during the week prior to enumeration, the data relate to the job of longest duration since January 1, 1990. Persons with two or more jobs were to report the information for the job at which they worked the most hours.

Occupation data are based on the 1980 classification structure which is composed of three levels of aggregation. There are 22 major groups which are subdivided into 80 minor groups. These, in turn, contain a total of 514 unit groups.

See Appendix 3 on page 298 for a complete listing of the occupations shown in the 1980 Standard Occupational Classification.

The 1981 and 1986 Censuses also used the 1980 Standard Occupational Classification to classify occupation data; therefore, direct comparisons with 1991 data are possible. For comparisons with 1971 data, adjustments must be made to the labour force universe and **only** occupation data classified to the 1971 Occupational Classification Manual can be used. For further information, refer to the definition of Labour: Occupation (Based on 1971 Occupational Classification Manual) in the 1991 Census Dictionary (Catalogue No. 92-301E).

Province

Refers to the major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified.

Sex

Refers to the gender of the respondent.

Territory

Refers to two major political divisions of Canada, namely Yukon Territory and Northwest Territories. From a statistical point of view, these territories are equivalent to provinces, i.e. a basic unit for which data are tabulated and cross-classified.

Work Activity

Refers to the number of weeks in which a person worked in the reference year (the year preceding the census year) and whether these weeks worked were full-time or part-time. Individuals who worked 49 to 52 weeks, mostly full time, are classified as full-year, full-time workers.

Data Quality

General

The 1991 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process from the preparation of materials, through the listing of dwellings and data collection to processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- **coverage errors**, which occur when dwellings and/or individuals are missed, incorrectly included or double counted;
- **non-response errors**, which result when responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reason;
- **response errors**, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response;
- **processing errors**, which can occur at various steps including: **coding**, when "write-in" responses are

transformed into numerical codes; **data capture**, when responses are transferred from the census questionnaire to computer tapes by key-entry operators; and **imputation** when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);

- **sampling errors**, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

Coverage Errors

Coverage errors affect the accuracy of the census counts, that is the sizes of the various census universes: population, families, households and dwellings. While steps have been taken to correct certain identifiable errors, the final counts are still subject to some degree of error resulting from persons or dwellings being missed, incorrectly included in the census or double counted.

Missed dwellings or persons result in **undercoverage**. Dwellings can be missed because of misunderstanding of enumeration area (EA) boundaries, or because dwellings are hidden or appear uninhabitable. Persons can be missed when their dwelling is missed or classified as vacant, or when individual household members are omitted from the questionnaire because the respondent misinterprets the instructions on whom to include. Some individuals may be missed because they have no usual residence and did not spend census night in any dwelling.

Dwellings or persons that are incorrectly included or double counted result in **overcoverage**. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately instead of being treated as part of a larger dwelling. Double counting of dwellings can occur, for example, because of ambiguity over EA boundaries. Persons can be double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not in the census population universe, such as a foreign resident or a fictitious person, may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

In 1991, four studies were undertaken to measure different aspects of coverage error. First, a sample of dwellings listed as vacant was revisited to verify that they really were vacant on Census Day. Adjustments have been made to the final census

counts for households and persons missed because their dwelling was incorrectly classified as vacant. Second, a sample of persons enumerated as temporary residents was selected to verify whether or not they were enumerated at their usual place of residence. Based on this sample, estimates were obtained of the number of persons missed because they were temporarily absent from their usual place of residence. Corresponding adjustments were made to the final population counts. Despite these adjustments, the final counts are still subject to some undercoverage. For Canada as a whole and for each province and territory, the magnitude of this residual undercoverage in the 1991 Census is being measured by means of a special study known as the Reverse Record Check. Undercoverage tends to be higher for certain segments of the population such as young adult males and recent immigrants. The fourth study, known as the Overcoverage Study, is designed to investigate overcoverage errors. The results of the Reverse Record Check and the Overcoverage Study, when taken together, furnish an estimate of net undercoverage.

Other Non-Sampling Errors

While coverage errors affect the number of units in the various census universes, other errors affect the characteristics of those units.

Sometimes, it is not possible to obtain a complete response from a household, even though the dwelling was identified as occupied and a questionnaire dropped off. The household members may have been away throughout the census period or, in rare instances, the householder may have refused to complete the form. More frequently, the questionnaire is returned but information is missing for some questions or individuals. Considerable effort is devoted to ensure as complete a response as possible. Census representatives edit the questionnaires and follow up on missing information. The Census Representative's work is then checked by both a supervisor and a quality control technician. Despite this, at the end of the collection stage, a small number of responses is still missing. Although missing entries are eliminated during processing by replacing a missing value by the corresponding entry for a "similar" record, there remain some potential **non-response errors**. This is particularly serious if the non-respondents differ in some respects from the respondents, since this procedure will result in **non-response bias**.

Even when a response is obtained, it may not be entirely accurate. The respondent may have misinterpreted the question or may have guessed the answer, especially when answering on behalf of another, possibly absent, household member. Such errors are referred to as **response errors**. While response errors usually arise from inaccurate information provided by respondents, they can also result from mistakes by the Census Representative when completing certain parts of the questionnaire, such as structural type of dwelling, or when calling back to obtain a missing response.

Some of the questions on the census document require a written response. During processing, these "write-in" entries are given a numeric code. **Coding errors** can occur, especially when the code list is extensive (as with, for example, language, ethnic origin, industry and occupation), and when the written response is ambiguous, incomplete or difficult to read. Coding errors are controlled, though not completely eliminated, by verifying a

sample of the codes and taking corrective action where necessary. For the first time in 1991, much of the coding was automated, partly in an effort to reduce the extent of coding errors.

The information on the questionnaires is key-entered onto a computer file. Two procedures are used to control the number of **data capture errors**. First, certain edits (such as range checks) are performed as the data are keyed. Second, a sample from each batch of documents is re-keyed and compared with the original entries. If there is more than a specified number of errors among the original entries, the whole batch is re-keyed.

Once the data have been captured, they are sent to Ottawa where they undergo a series of computer checks to identify missing or inconsistent responses. In the case of inconsistent responses, it has first to be decided which response is to be considered invalid. Invalid or missing responses must then be replaced by valid responses, that is, responses which are consistent with other data on the record. For a small proportion of cases, the correct response can be inferred from other data on the record. In most cases, however, this is not possible and a valid response is obtained from a "donor" record selected at random from among a group of consistent records which are similar to the invalid record in terms of a number of related characteristics. There is, of course, no guarantee that the imputed value will necessarily be the correct response for the individual concerned. However, provided the missing or invalid records are similar, on average, to the valid records, any **imputation errors** will more or less cancel out when results are tabulated for a sufficiently large geographic area or population subgroup.

Various studies are being carried out to evaluate the quality of the responses obtained in the 1991 Census. For each question, response rates and edit failure rates have been calculated. These can be useful in identifying the potential for non-response and other errors. Also, tabulations from the 1991 Census have been or will be compared with corresponding estimates from previous censuses, from sample surveys (such as the Labour Force Survey) and from various administrative records (such as birth registrations and municipal assessment records). Such comparisons can indicate potential quality problems or at least discrepancies between the sources.

In addition to these aggregate-level comparisons, there are some micromatch studies in progress, in which census responses are compared with another source of information at the individual record level. For certain "stable" characteristics (such as age, sex, mother tongue, place of birth), the responses obtained in the 1991 Census, for a sample of individuals, are being compared with those for the same individuals in the 1986 Census. Also, following the 1991 Census, a sample of persons was re-enumerated, primarily to determine overcoverage rates. At the same time, however, interviewers asked a series of detailed questions on language, ethnic origin and marital status; the responses will be compared with the corresponding census responses in order to identify, and hopefully understand, response errors.

Sampling Errors

Estimates obtained by weighting up responses collected on a sample basis are subject to error due to the fact that the distribution of characteristics within the sample will not usually be identical to the distribution of characteristics within the population from which the sample has been selected.

The potential error introduced by sampling will vary according to the relative scarcity of the characteristics in the population. For large cell values, the potential error due to sampling, as a proportion of the cell value, will be relatively small. For small cell values, this potential error, as a proportion of the cell value, will be relatively large.

The potential error due to sampling is usually expressed in terms of the so-called "standard error". This is the square root of the average, taken over all possible samples of the same size and design, of the squared deviation of the sample estimate from the value for the total population.

The table below provides approximate measures of the standard error due to sampling. These measures are intended as a general guide only.

Table: Approximate Standard Error Due to Sampling for 1991 Census Sample Data

Cell Value	Approximate Standard Error
50 or less	15
100	20
200	30
500	45
1,000	65
2,000	90
5,000	140
10,000	200
20,000	280
50,000	450
100,000	630
500,000	1400

Users wishing to determine the approximate error due to sampling for any given cell of data, based upon the 20% sample, should choose the standard error value corresponding to the cell value that is closest to the value of the given cell in the census tabulation. When using the obtained standard error value, in general the user can be reasonably certain that, for the enumerated population, the true value (discounting all forms of error other than sampling) lies within plus or minus three times the standard error (e.g., for a cell value of 1,000, the range would be $1,000 \pm 3 \times 65$ or $1,000 \pm 195$).

The standard errors given in the table above will not apply to population or universe (persons, households, dwellings or families) totals or subtotals for the geographic area under

consideration (see Sampling and Weighting). The effect of sampling for these cells can be determined by comparison with a corresponding 100% publication.

The effect of the particular sample design and weighting procedure used in the 1991 Census will vary, however, from one characteristic to another and from one geographic area to another. The standard error values in the table may, therefore, understate or overstate the error due to sampling.

Confidentiality and Random Rounding

The figures shown in the tables have been subjected to a confidentiality procedure known as "**random rounding**". This is done to prevent the possibility of associating statistical data with any identifiable individual. Under this method, all figures including totals are randomly rounded either up or down to a multiple of "5", and in some cases "10". While providing strong protection against disclosure, this technique does not add significant error to the census data. However, there are some consequences for the users. Since totals are independently rounded, they do not necessarily equal the sum of individually rounded figures in distributions. Also, minor differences can be expected in corresponding totals and cell values in various census tabulations. Similarly, percentages, which are calculated on rounded figures, do not necessarily add up to 100. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data. It should also be noted that small cell counts may suffer a significant distortion as a result of random rounding. Individual data cells containing small numbers may lose their precision as a result.

Users should be aware of possible data distortions when they are aggregating these rounded data. Imprecisions as a result of rounding tend to cancel each other out when data cells are reaggregated. However, users can minimize these distortions by using, whenever possible, the appropriate subtotals when aggregating.

For those requiring maximum precision, the option exists to use custom tabulations. With custom products, aggregation is done using individual census database records. Random rounding occurs only after the data cells have been aggregated, thus minimizing any distortion.

In addition to random rounding, **area suppression** has been adopted to further protect the confidentiality of individual responses.

Area suppression results in the deletion of all characteristic data for geographic areas with populations below a specified size. The extent to which data are suppressed depends upon the following factors:

- if the data are tabulated from the 100% database, suppression is based upon the total population;
- if the data are tabulated from the 20% sample database, suppression is based upon the non-institutional population;

- if the data contain an income distribution, those areas with populations below 250 persons are suppressed;
- if the data **do not** contain an income distribution, those areas with a population of less than 40 persons are suppressed.

In all cases, suppressed data are included in the appropriate higher aggregate subtotals and totals.

This technique is being implemented for all products involving subprovincial data (i.e. Profile series, basic summary tabulations, semi-custom and custom data products) collected on a 100% or 20% sample basis.

Sampling and Weighting

The 1991 Census data were collected either on a 100% basis (i.e. for all households) or on a sample basis (i.e. from only a random sample of households) with data weighted to provide estimates of the entire population. The information in this report was collected on a 20% sample basis and weighted up to compensate for sampling. All table headings are noted accordingly. Note that, on most Indian reserves and remote areas, all data were collected on a 100% basis.

For any given geographic area, the weighted population, household, dwelling or family total or subtotal may differ from that shown in reports containing data collected on a 100% basis. Such variation (in addition to the effect of random rounding) will be due to sampling.

Special Notes

Population Counts Based on Usual Residence

The population counts shown here for a particular area represent the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada, as well as those considered "non-permanent residents" (see note on this group). In most areas, there is little difference between the number of usual residents and the number of people staying in the area on Census Day. For certain places, however, such as tourist or vacation areas, or those including large work camps, the number of people staying in the area at any particular time could significantly exceed the number of usual residents shown here.

Incompletely Enumerated Indian Reserves and Indian Settlements

On some Indian reserves and Indian settlements in the 1991 Census, enumeration was not permitted or was interrupted before it could be completed. Moreover, some Indian reserves and Indian settlements were enumerated late or the quality of the collected data was considered inadequate. These geographic areas (a total of 78) are called incompletely enumerated Indian reserves and Indian settlements.

Data for 1991 are therefore not available for the incompletely enumerated reserves and settlements and are not included in tabulations. Data for geographic areas containing one or more of these reserves and settlements are therefore noted accordingly. Because of the missing data, users are cautioned that for the affected geographic areas, comparisons (e.g., percentage change) between 1986 and 1991 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can be significant for smaller areas, where the affected reserves and settlements account for a higher proportion of the population.

A list of incompletely enumerated Indian reserves and Indian settlements along with Population and Occupied Private Dwelling Counts from the last two censuses (where available) has been compiled and is shown in Appendix 1.

Non-permanent Residents

In 1991, for the first time, the census of population included both permanent and non-permanent residents of Canada. Non-permanent residents are persons who hold student or employment authorizations, Minister's permits or who are refugee claimants.

Prior to 1991, only permanent residents of Canada were included in the census. (The only exception to this was 1941.) Non-permanent residents were considered foreign residents and were not enumerated.

Today in Canada, non-permanent residents make up a growing segment of the population. Their presence can affect the demand for such government services as health care, schooling and employment programs. The inclusion of non-permanent residents in the 1991 Census will also facilitate comparisons with provincial and territorial statistics (marriages, divorces, births and deaths) which include this population. In addition, the census definition is now closer to the United Nations' recommendation that long-term residents (persons living in a country for one year or longer) be enumerated.

Total population counts, as well as counts for all variables, will be affected by this change in the 1991 Census universe. According to the 1991 Census, there were 223,410 non-permanent residents in Canada, representing slightly less than 1% of the total population. Users should be especially careful when comparing data from 1991 and previous censuses in geographic areas where there is a concentration of non-permanent residents. These include the major metropolitan areas of Ontario, British Columbia and Quebec. The population distribution of non-permanent residents for the provinces, territories and census metropolitan areas is shown in Appendix 2.

Although every attempt was made to enumerate non-permanent residents, the completeness of enumeration of this population was below that achieved for permanent residents. Factors such as language difficulty and a reluctance to complete a government form or understand the need to participate, may have affected the enumeration of non-permanent residents and resulted in undercounting.

Occupation

The following minor data quality problems should be taken into consideration when using this publication.

General managers and other senior officials (1130): The unit group “General managers and other senior officials (1130)” should not be interpreted as being exclusively senior managers or corporate managers. These people are coded to this category but other respondents who consider themselves general managers have also been assigned this code. The term “manager” is used more and more frequently in the labour market and persons having this “title” may have a variety of responsibilities. These people respond to the census questionnaire in a general way because the nature of their work is varied. It is suggested that employment income data be used in conjunction with that for occupation as an indicator of senior management.

Farm management occupations (1146): This unit group includes occupations concerned with managing farms or holdings, for an employer, on a paid basis. Most farmers who are working for wages and salaries or who are self-employed in incorporated companies do not indicate farm management when responding to the census questionnaire. They are initially coded to a farming code and subsequently reassigned to 1146 during processing. Data users interested in farmers should be aware that most of the persons coded to 1146 consider themselves to be farmers.

Farmers (7111): Data for farmers, unit group (7111), are a grouping of livestock farmers (7113), crop farmers (7115) and farmers, n.e.c. (7119). These three farmer codes were collapsed due to the difficulty encountered in coding vague responses. In addition, farmers, whether livestock, crop or a combination of these, may report as their principal activities tasks associated with crop farming (i.e. seeding and planting, etc.) due to the reference period of the last week in May for the census.

Farm workers (7183, 7185, 7199): Data for farm workers should be used with caution. The reference period for the census was the last week of May, during 1986 and 1991. Farm workers, whether livestock, crop or a combination of these, will be primarily occupied at this period of time in seeding, planting or otherwise working the land. The principal activities reported on the census questionnaires may imply, therefore, that these people are crop farm workers. Crop farm workers (7185) may consequently be overstated at the expense of livestock workers (7183) and other farming, horticultural and animal husbandry occupations, n.e.c. (7199).

Tailors and dressmakers (8553) and Sewing-machine operators (8563): In minor group 855-856, occupations associated with textile, fur and leather products, there is confusion in the coding of tailors and dressmakers (8553) and sewing-machine operators (8563), particularly in the province of Quebec. Consequently, tailor and dressmaker estimates are high, at the expense of the sewing-machine operators.

Relationship of income estimates to the national accounts

An evaluation of census income estimates against personal income estimates in the national accounts was carried out. After adjustments to the personal income estimates for concepts and coverage, it was found that overall census estimates of aggregate income in 1990, from comparable sources, are just over 92% of similar national accounts estimates. The differences between census and national accounts estimates for wages and salaries as well as for non-farm self employment income are negligible while income from self-employment in farming appears to be overestimated in Census by about 4%. On the whole, there is very little difference between census and comparable national accounts estimates of total employment income. For further details, see the 1991 Census Technical Report on income, Catalogue No. 92-340E.

Analytical Products – 1991 Census

96-317E	Earnings of Canadians Focus on Canada
96-318E	Family Income in Canada Focus on Canada

In addition to the products noted, selected income data, including the incidence of low income, are profiled for the population, census families and private households in federal electoral districts, census metropolitan areas, census divisions and subdivisions and other standard geographic areas in the **Area Profile Series**.

Regional Reference Centres

Statistics Canada's Regional Reference Centres provide a full range of census products and services. Each reference centre is equipped with a library and a sales counter where users can consult or purchase publications, microcomputer diskettes, microfiche, maps and more.

The staff of the Regional Reference Centres provides consultative and research services in addition to providing after-sales service and support, including seminars and workshops on the use of Statistics Canada information.

Each centre has facilities to retrieve information from Statistics Canada's computerized data retrieval systems CANSIM and E-STAT. A telephone inquiry service is also available with toll-free numbers for regional users outside local calling areas. Call, write, fax or visit the nearest Regional Reference Centre for more information.

Additional References and Services

In addition to Regional Reference Centres and depository libraries, Statistics Canada publications may be ordered through your **local bookstore** or **subscription agent**. Contact the nearest Regional Reference Centre for a list of Canadian outlets available, or consult the 1991 Census Catalogue (Catalogue No. 92-302E).

Secondary distributors offer data access and analytical support through a variety of consulting and computer-based services not available at Statistics Canada. The names and addresses of licensed distributors may be obtained from any Regional Reference Centre.

Statistics Canada provides **digital geographic products** which allow computer manipulation of geographic data. A customized retrieval service is available for users who wish to define their own geographic area of study. A variety of data retrieval files and services provide flexibility in selecting a geographic base.

A complete description of available digital files and services is documented in the 1991 Census Catalogue (Catalogue No. 92-302E).

Information concerning **census of agriculture products and services** may be referenced in the 1991 Census of Agriculture Products and Services publication, Catalogue No. 92-303, or by calling toll free 1-800-465-1991.

Users with special data requirements may request **post-census survey services**. Data are made available on microcomputer diskettes for use with spreadsheet software, or on paper output. For additional information, please contact the nearest Regional Reference Centre.

The Electronic Data Dissemination Division (EDDD) is responsible for CANSIM, Statistics Canada's computerized database network and information retrieval service. Users are provided with access to current and historical statistics in various forms including specialized data manipulation and analysis packages, graphics facilities and a bibliographic search service. For more information about CANSIM, contact any Regional Reference Centre.

Définitions

Seul un résumé des définitions des termes géographiques et des concepts du recensement est présenté ici. Les utilisateurs doivent consulter le **Dictionnaire du recensement de 1991** (n° 92-301F au catalogue) pour les définitions complètes et les observations additionnelles pertinentes.

Âge

Âge au dernier anniversaire de naissance (à la date de référence du recensement, soit le 4 juin 1991). Cette variable est établie d'après la réponse à la question sur la date de naissance qui demande le jour, le mois et l'année de naissance. Les personnes qui ne connaissaient pas la date exacte de leur naissance devaient donner la meilleure estimation possible.

Profession (selon la Classification type des professions de 1980)

Genre de travail que faisaient les personnes pendant la semaine de référence. Le genre de travail exécuté est défini d'après le type d'emploi occupé par le recensé et la description des tâches les plus importantes qui s'y rattachent. Les données ont trait aux personnes âgées de 15 ans et plus, à l'exclusion des pensionnaires d'un établissement institutionnel. Si le recensé n'avait pas d'emploi au cours de la semaine ayant précédé le dénombrement, les données portent sur l'emploi qu'il avait occupé le plus longtemps depuis le 1^{er} janvier 1990. Les personnes qui avaient deux emplois ou plus devaient donner des renseignements sur l'emploi auquel elles avaient consacré le plus d'heures de travail.

Les données sur la profession sont groupées selon la structure de la classification de 1980 à trois niveaux d'agrégation : 22 grands groupes qui se subdivisent en 80 sous-groupes et, par la suite, en 514 groupes de base.

Reportez-vous à l'annexe 3 à la page 327 pour une liste complète des professions selon la Classification type des professions de 1980.

Comme la Classification type des professions de 1980 a été utilisée également dans le cadre des recensements de 1981 et de 1986 pour classer les données sur la profession, il est possible d'établir des comparaisons directes avec les données de 1991. Pour ce qui est des comparaisons avec les données de 1971, il faut apporter certaines modifications à l'univers de la population active et **seules** les données sur la profession classées selon La classification des professions de 1971 peuvent être utilisées. Pour de plus amples renseignements, reportez-vous à la définition de la variable Travail : Profession (selon La classification des professions de 1971) dans le Dictionnaire du recensement de 1991 (n° 92-301F au catalogue).

Province

Principale division politique du Canada. Du point de vue statistique, il s'agit d'une unité de base selon laquelle les données sont totalisées et recoupées.

Revenu d'emploi

Revenu total reçu en 1990 par les personnes âgées de 15 ans et plus sous forme de :

Salaires et traitements

Salaires et traitements bruts avant les retenues pour l'impôt sur le revenu, les pensions, l'assurance-chômage, etc. Sont compris les soldes et les indemnités militaires, les pourboires, les commissions, les gratifications et les gains provenant de tout genre d'emploi occasionnel réalisés durant l'année civile 1990. Est exclue la valeur des allocations et avantages imposables fournis gratuitement par l'employeur tels que le logement ou l'utilisation d'un véhicule automobile.

Revenu net dans une entreprise non agricole non constituée en société et/ou dans l'exercice d'une profession

Revenu net (recettes brutes moins les dépenses d'exploitation, telles que les salaires, les loyers et l'amortissement) provenant de l'exploitation d'une entreprise non agricole non constituée en société ou dans l'exercice d'une profession pour son propre compte, durant l'année civile 1990. Dans le cas d'une association, le recensé devait déclarer seulement sa propre part du revenu. Sont inclus le revenu net des personnes qui gardent des enfants à leur propre domicile, celui des exploitants d'entreprises de distribution directe, par exemple pour la vente et la livraison de produits de beauté, ainsi que le revenu que les artistes, les écrivains, les professeurs de musique, les coiffeurs et coiffeuses, les couturiers et couturières tirent de leurs activités autonomes.

Revenu net provenant d'un travail autonome agricole

Revenu net (recettes brutes provenant de la vente de produits agricoles, moins l'amortissement et les frais d'exploitation) tiré de l'exploitation d'une ferme, pour son propre compte ou en association, durant l'année civile 1990. Dans le cas d'une association, le recensé devait déclarer seulement sa propre part du revenu. Sont inclus dans le revenu net les subventions, les paiements supplémentaires ou les paiements anticipés versés aux agriculteurs par les administrations fédérale et provinciales. Par contre, la valeur du revenu en nature, comme les produits agricoles cultivés et consommés à la ferme, n'est pas incluse.

Revenu en dollars constants (1990)

Il s'agit des statistiques sur le revenu de 1985 exprimées en dollars de 1990. Pour convertir les revenus de 1985 en dollars de 1990, on a augmenté les valeurs de 1985 selon les modifications de l'indice des prix à la consommation entre 1985 et 1990.

Revenu moyen d'emploi

Le revenu moyen d'emploi est la moyenne pondérée des revenus total d'emploi d'un groupe de personnes âgées de 15 ans et plus. Pour établir le revenu moyen d'emploi à partir de données non arrondies, on divise le revenu d'emploi agrégé du groupe correspondant (par exemple, les hommes de 45 à 54 ans) par le nombre de personnes qui ont déclaré un revenu d'emploi dans ce groupe.

Le revenu moyen d'emploi des particuliers est calculé pour les personnes qui sont âgées d'au moins 15 ans et qui ont un revenu d'emploi (positif ou négatif).

Semaines travaillées à plein temps ou à temps partiel

Variable s'appliquant aux personnes qui ont travaillé durant l'année de référence (l'année précédant l'année du recensement). Ces dernières devaient préciser si elles avaient travaillé des semaines complètes (30 heures ou plus par semaine) ou non durant l'année de référence. Les personnes qui avaient un emploi à temps partiel pendant une partie de l'année et un emploi à plein temps pendant l'autre partie devaient répondre en fonction de l'emploi pour lequel elles avaient travaillé le plus grand nombre de semaines.

Sexe

Qualité d'homme ou de femme.

Territoire

Il s'agit de deux grandes divisions politiques du Canada, soit le Territoire du Yukon et les Territoires du Nord-Ouest. Du point de vue statistique, ces territoires sont l'équivalent des provinces, c'est-à-dire une unité de base pour laquelle des données sont totalisées et recoupées.

Travail

Nombre de semaines au cours desquelles les personnes ont travaillé durant l'année de référence (l'année précédant l'année du recensement), à plein temps ou à temps partiel. Les individus qui ont travaillé de 49 à 52 semaines, surtout à plein temps, sont classés comme étant travailleurs à plein temps toute l'année.

Qualité des données

Généralités

Le recensement de 1991 a été une entreprise complexe et de grande envergure. Bien que l'on ait déployé des efforts considérables pour assurer le respect des normes élevées tout au cours des opérations de la collecte et du traitement, il est inévitable que les estimations résultantes soient entachées d'erreurs. Il faut que les utilisateurs des données du recensement sachent que ces erreurs existent et qu'ils aient une idée générale de ses principales composantes afin d'être en mesure de déterminer si les données produites peuvent leur être utiles et d'évaluer les risques auxquels ils s'exposent en tirant des conclusions ou en prenant des décisions à partir de ces données.

Des erreurs peuvent se produire pratiquement à toutes les étapes du recensement, depuis la préparation des documents jusqu'au traitement des données, en passant par l'établissement des listes de logements et la collecte des données. Certaines erreurs, qui surviennent plus ou moins au hasard, ont tendance à s'annuler lorsque les réponses fournies par les divers répondants sont agrégées pour un groupe assez important.

Dans le cas des erreurs de cette nature, l'estimation correspondante sera d'autant plus précise que le groupe visé sera grand. C'est pourquoi on conseille aux utilisateurs de faire preuve de prudence lorsqu'ils utilisent des estimations relatives à de petits groupes. Toutefois, certaines erreurs peuvent survenir de façon plus systématique et introduire un «biais» dans les estimations. Comme ce biais persiste quelle que soit la taille du groupe pour lequel les réponses sont agrégées et comme il est particulièrement difficile d'en mesurer l'importance, les erreurs systématiques posent pour la plupart des utilisateurs de données des problèmes plus graves que les erreurs aléatoires mentionnées plus haut.

En ce qui concerne les données du recensement en général, les principaux types d'erreur sont les suivants :

- les **erreurs de couverture** qui se produisent lorsqu'on oublie des logements et/ou des personnes, qu'on les englobe à tort ou qu'on les compte deux fois;
- les **erreurs dues à la non-réponse** qui surviennent lorsque l'on n'a pu obtenir de réponses d'un petit nombre de ménages et/ou de personnes en raison d'une absence prolongée ou pour toute autre raison;
- les **erreurs de réponse** qui surviennent lorsque le répondant, ou parfois le recenseur, a mal interprété une question du recensement et a inscrit une mauvaise réponse;
- les **erreurs de traitement** qui peuvent se produire à diverses étapes, notamment au **codage**, lorsque les réponses en lettres sont converties en codes numériques; à la **saisie des données**, lorsque les préposés à l'entrée des données transfèrent sur bandes pour ordinateur les réponses figurant au questionnaire du recensement; à l'**imputation**, lorsqu'une réponse «valide», mais pas nécessairement exacte, est insérée dans un enregistrement par l'ordinateur pour remplacer une réponse manquante ou «invalides» («valides» et «invalides» renvoient à la cohérence de la réponse, compte tenu des autres renseignements compris dans l'enregistrement);
- les **erreurs d'échantillonnage** qui s'appliquent uniquement aux questions supplémentaires figurant dans le questionnaire complet distribué à un échantillon de un cinquième des ménages; elles résultent du fait que les réponses à ces questions, une fois pondérées pour représenter l'ensemble de la population, diffèrent inévitablement des résultats que l'on aurait obtenus si l'on avait posé ces questions à tous les ménages.

Les types d'erreur mentionnés plus haut ont tous une composante aléatoire et une composante systématique. Toutefois, la composante systématique de l'erreur d'échantillonnage est d'ordinaire très petite comparativement à sa composante aléatoire. Dans le cas des autres erreurs non dues à l'échantillonnage, tant la composante aléatoire que la composante systématique peuvent être importantes.

Erreurs de couverture

Les erreurs de couverture ont une incidence directe sur la précision des chiffres du recensement, c'est-à-dire sur la taille

des divers univers du recensement : la population, les familles, les ménages et les logements. Bien que des mesures aient été prises pour corriger certaines erreurs identifiées, les chiffres définitifs sont toujours entachés d'une certaine erreur découlant du fait que des personnes ou des logements ont été oubliés, englobés à tort dans le recensement ou comptés deux fois.

L'oubli de logements ou de personnes se traduit par un **sous-dénombrement**. Des logements peuvent être oubliés en raison d'une mauvaise interprétation des limites du secteur de dénombrement (SD), ou du fait qu'ils sont cachés ou semblent inhabitables. Des personnes peuvent être oubliées parce que leur logement est oublié ou classé comme inoccupé ou quand certains membres du ménage sont omis sur le questionnaire parce que le répondant a mal interprété les instructions concernant les personnes à inclure. Enfin, certaines personnes peuvent être oubliées parce qu'elles n'ont pas de domicile habituel et qu'elles n'ont pas passé la nuit du recensement dans un logement.

Le dénombrement à tort ou le double compte de logements ou de personnes se traduit par un **surdénombrement**. Il peut y avoir surdénombrement des logements lorsque des constructions impropres à l'habitation sont classées comme logements ou lorsque des unités d'habitation ne répondant pas à la définition du logement retenue pour les fins du recensement sont comptées séparément plutôt que d'être considérées comme faisant partie d'un logement plus grand. Il peut y avoir double compte des logements lorsqu'il existe, par exemple, une certaine ambiguïté au sujet des limites des SD. Les personnes peuvent être comptées deux fois parce que leur logement a été compté deux fois ou parce que les lignes directrices concernant les personnes à inscrire dans le questionnaire ont été mal interprétées. À l'occasion, il arrive qu'une personne ne faisant pas partie de l'univers du recensement, comme un résident étranger ou une personne fictive, soit dénombrée à tort. En moyenne, le surdénombrement est moins susceptible de se produire que le sous-dénombrement; les chiffres des logements et des personnes sont donc probablement légèrement sous-estimés.

En 1991, quatre études ont été entreprises afin d'évaluer les différents aspects de l'erreur de couverture. Premièrement, on a visité de nouveau un échantillon de logements classés comme inoccupés afin de vérifier s'ils étaient réellement inoccupés le jour du recensement. Les chiffres définitifs du recensement ont ensuite été corrigés pour tenir compte des personnes ou des ménages oubliés parce que leur logement a été classé par erreur comme inoccupé. Deuxièmement, on a prélevé un échantillon de personnes dénombrées comme résidents temporaires afin de vérifier si elles avaient ou non été dénombrées à leur domicile habituel. À partir de cet échantillon, on a établi des estimations du nombre de personnes oubliées parce qu'elles étaient temporairement absentes de leur domicile habituel, puis on a rectifié les chiffres définitifs de population en conséquence. Malgré ces rectifications, les chiffres définitifs sont encore sujets à un certain sous-dénombrement. Une troisième étude, connue sous le nom de contre-vérification des dossiers, est réalisée pour déterminer l'importance de ce sous-dénombrement résiduel, pour le Canada dans son ensemble ainsi que pour chaque province et territoire, à l'occasion du recensement de 1991. Le sous-dénombrement tend à être plus élevé pour certains segments de la population comme les jeunes adultes de

sexe masculin et les personnes récemment immigrées. La quatrième étude, connue sous le nom d'étude du surdénombrement, a pour objet d'étudier les erreurs de surdénombrement. Ensemble, les résultats de la contre-vérification des dossiers et de l'étude du surdénombrement fournissent une estimation du sous-dénombrement net.

Autres erreurs non dues à l'échantillonnage

Alors que les erreurs de couverture ont une incidence sur le nombre d'unités comprises dans les divers univers du recensement, les autres erreurs influent sur les chiffres relatifs aux caractéristiques de ces unités.

Il est parfois impossible d'obtenir une réponse complète d'un ménage, même si le logement a été classé comme étant occupé et un questionnaire a été livré. Il se peut que les membres du ménage aient été absents pendant toute la période du recensement ou, en de rares occasions, que le membre responsable du ménage ait refusé de remplir le questionnaire. Il arrive plus souvent que le questionnaire soit retourné, mais qu'il y manque des données à certaines questions ou pour certaines personnes. Des efforts considérables sont déployés afin d'obtenir une réponse la plus complète possible. Les recenseurs contrôlent les questionnaires et assurent un suivi à l'égard de l'information manquante. Le travail du recenseur est ensuite vérifié tant par un surveillant que par un technicien du contrôle qualitatif. Malgré tout, il existe toujours un petit nombre de réponses manquantes à la fin de l'étape de la collecte. Bien que les entrées manquantes soient éliminées en cours de traitement en remplaçant chaque valeur manquante par la valeur correspondante figurant dans un enregistrement «similaire», il est possible que certaines **erreurs de non-réponse** s'y glissent. Cela est particulièrement grave lorsque les personnes non répondantes diffèrent des répondants sous certains aspects; en effet, cette procédure se traduira par l'introduction d'un **biais de non-réponse**.

Même lorsqu'une réponse est obtenue, il se peut qu'elle ne soit pas tout à fait exacte. Il est possible que le répondant ait mal interprété la question ou ait donné une réponse au jugé, surtout lorsqu'il répondait pour le compte d'un autre membre du ménage, qui était peut-être absent. Ces erreurs sont désignées sous le nom d'**erreurs de réponse**. Bien que ces erreurs surviennent d'ordinaire du fait que les répondants aient fourni des renseignements inexacts, elles peuvent aussi résulter d'erreurs commises par les recenseurs en remplissant certaines parties du questionnaire, comme le type de construction résidentielle, ou au moment du rappel effectué pour obtenir une réponse manquante.

Certaines questions du questionnaire du recensement nécessitent une réponse en lettres. Pendant le traitement, on attribue un code numérique à ces réponses. Il est possible que des **erreurs de codage** surviennent, surtout lorsque la liste de codes est longue (comme dans le cas de la langue, de l'origine ethnique, de l'industrie et de la profession) et que la réponse écrite est ambiguë, incomplète ou difficile à lire. On limite le nombre d'erreurs de codage, sans toutefois l'éliminer complètement, en vérifiant un échantillon des codes et en prenant des mesures correctives au besoin. Pour la première fois en 1991, une grande partie des tâches de codage ont été

automatisées afin, entre autres, de réduire le nombre d'erreurs de codage.

Les renseignements figurant dans les questionnaires sont introduits sur clavier dans un fichier informatique. Deux méthodes de résolution ordonnée sont utilisées pour limiter le nombre d'erreurs à la saisie des données. Dans un premier temps, certains contrôles (comme des vérifications d'étendue) sont effectués à mesure que les données sont entrées. Dans un second temps, on introduit de nouveau sur clavier un échantillon tiré de chaque lot de documents, puis on compare les entrées résultantes aux entrées initiales. Si le nombre d'erreurs relevées au sein des entrées initiales dépasse un seuil prédéterminé, on reprend l'introduction sur clavier des données de tout le lot de documents.

Une fois les données saisies, elles sont envoyées à Ottawa où elles sont soumises à une série de contrôles informatiques visant à relever les réponses manquantes ou incohérentes. Dans le cas des réponses incohérentes, il faut d'abord définir ce que l'on entend par une réponse invalide. Les réponses invalides ou manquantes doivent ensuite être remplacées par des réponses valides, c'est-à-dire par des réponses qui sont compatibles avec les autres données figurant dans l'enregistrement. Dans un petit nombre de cas, il est possible de déduire la réponse correcte à partir des autres données de l'enregistrement. Toutefois, dans la majorité des cas, cela est impossible et on obtient une réponse valide à partir d'un enregistrement «donneur» prélevé au hasard parmi un groupe d'enregistrements cohérents qui sont pour un certain nombre de caractéristiques connexes similaires à celles de l'enregistrement invalide. Bien sûr, rien ne garantit que la valeur imputée sera nécessairement identique à la réponse correcte pour la personne concernée. Cependant, pour autant que les enregistrements manquants ou invalides soient, en moyenne, similaires aux enregistrements valides, les **erreurs à l'imputation** s'annuleront plus ou moins une fois que les résultats auront été totalisés pour une région géographique ou un sous-groupe de population de taille suffisante.

Diverses études sont réalisées afin d'évaluer la qualité des réponses obtenues dans le cadre du recensement de 1991. Ainsi, on a calculé les taux de réponse et les taux de rejet au contrôle pour chaque question. Ces taux peuvent permettre de déterminer le potentiel de non-réponse et d'autres erreurs. De même, les totalisations établies à partir des données du recensement de 1991 ont été ou seront comparées avec les estimations correspondantes obtenues à partir des données des recensements précédents, des enquêtes-échantillon (comme l'Enquête sur la population active) et de divers dossiers administratifs (comme les registres des naissances et le cadastre municipal). Ces comparaisons peuvent permettre de cerner les problèmes de qualité éventuels ou, à tout le moins, de relever les divergences entre les sources.

Outre ces comparaisons entre données agrégées, certaines études de couplage de microdonnées sont actuellement menées afin de comparer les réponses de certains particuliers obtenues au recensement à celles d'une autre source de renseignements. Pour un certain nombre de caractéristiques «stables» (comme l'âge, le sexe, la langue maternelle, le lieu de naissance), on compare les réponses obtenues auprès d'un échantillon de personnes à l'occasion du recensement de 1991

aux réponses obtenues des mêmes personnes à l'occasion du recensement de 1986. De même, à la suite du recensement de 1991, un échantillon de personnes ont été dénombrées de nouveau surtout pour déterminer les taux de surdénombrement. En même temps, cela a permis aux intervieweurs de poser une série de questions détaillées sur la langue, l'origine ethnique et l'état matrimonial; les réponses données à ces questions seront comparées aux réponses correspondantes du recensement afin de reconnaître les erreurs de réponse et tenter de les comprendre.

Erreurs d'échantillonnage

Les estimations obtenues en pondérant les réponses recueillies auprès d'un échantillon sont susceptibles d'être entachées d'erreurs en raison de la répartition des caractéristiques au sein de l'échantillon qui n'est généralement pas identique à la répartition correspondante au sein de la population dans laquelle l'échantillon a été prélevé.

L'erreur susceptible d'être introduite par l'échantillonnage variera en fonction de la rareté relative de la caractéristique étudiée au sein de la population. Lorsque la valeur contenue dans la case est élevée, cette erreur sera relativement faible proportionnellement à cette valeur. Lorsque la valeur contenue dans la case est faible, cette erreur sera relativement importante proportionnellement à cette valeur.

L'erreur susceptible d'être introduite par l'échantillonnage est d'ordinaire exprimée sous forme d'«erreur type». Il s'agit de la racine carrée de la moyenne, calculée pour l'ensemble des échantillons de même taille prélevés selon le même plan d'échantillonnage, des carrés de l'écart de l'estimation obtenue à partir de l'échantillon par rapport à la valeur pour l'ensemble de la population.

Le tableau ci-dessous fournit des mesures approximatives de l'erreur type due à l'échantillonnage. Ces mesures sont données uniquement à titre indicatif.

Tableau : Erreur type approximative introduite par l'échantillonnage pour les données-échantillon du recensement de 1991

Valeur contenue dans la case	Erreur type approximative
50 ou moins	15
100	20
200	30
500	45
1,000	65
2,000	90
5,000	140
10,000	200
20,000	280
50,000	450

100,000	630
500,000	1400

Les utilisateurs souhaitant déterminer l'erreur d'échantillonnage approximative pour une case de données dont la valeur a été obtenue à partir de l'échantillon de 20 % doivent choisir l'erreur type correspondant à l'entrée dans la colonne «Valeur contenue dans la case» ci-dessus qui se rapproche le plus de celle qui figure dans la case de données de la totalisation en cause. En utilisant la valeur ainsi obtenue pour l'erreur type, l'utilisateur peut, en général et à juste titre, être certain que la valeur réelle pour la population dénombrée (ne tenant pas compte des formes d'erreur autres que l'erreur d'échantillonnage) ne s'écarte pas de la valeur contenue dans la case dans une proportion supérieure ou inférieure à trois fois l'erreur type (p. ex., si la valeur contenue dans la case est 1,000, la fourchette à l'intérieur de laquelle se situe la valeur réelle serait de $1,000 \pm 3 \times 65$ ou de $1,000 \pm 195$).

Les erreurs types données dans le tableau ci-dessus ne s'appliquent pas aux *totaux* ou aux *totaux partiels* relatifs à la population ou aux univers (personnes, ménages, logements ou familles) pour la région géographique étudiée (voir Échantillonnage et pondération). On peut déterminer l'effet de l'échantillonnage pour ces valeurs en les comparant à celles des publications correspondantes contenant des données intégrales.

Il est à noter que l'effet du plan d'échantillonnage et de la méthode de pondération utilisés dans le cadre du recensement de 1991 variera d'une caractéristique à l'autre et d'une région géographique à l'autre. Il est donc possible que les valeurs de l'erreur type données dans le tableau ci-dessus sous-estiment ou surestiment l'erreur attribuable à l'échantillonnage.

Confidentialité et arrondissement aléatoire

Afin de protéger le caractère confidentiel des renseignements fournis, les chiffres indiqués aux tableaux ont fait l'objet d'un **arrondissement aléatoire** qui supprime toute possibilité d'associer des données statistiques à une personne facilement reconnaissable. Selon cette méthode, tous les chiffres, y compris les totaux, sont arrondis de façon aléatoire (vers le haut ou vers le bas) jusqu'à un multiple de 5 et dans certains cas, de 10. Cette technique assure une protection efficace contre la divulgation sans ajouter d'erreur significative dans les données du recensement. Cependant, elle entraîne certaines conséquences pour les utilisateurs. Comme les totaux sont arrondis séparément, ils ne correspondent pas nécessairement à la somme des chiffres arrondis séparément dans les répartitions. De plus, il faut s'attendre à ce que les totaux et les autres chiffres correspondants dans diverses totalisations du recensement présentent quelques légères différences. De même, la somme des pourcentages, qui sont calculés à partir de chiffres arrondis, ne correspond pas forcément à 100. Les répartitions en pourcentage et les taux sont dans la plupart des cas basés sur des données arrondies, alors que les variations en

pourcentage et les moyennes sont basées sur des données non arrondies. La distorsion importante pouvant résulter de l'arrondissement aléatoire dans le cas des cases de faible valeur mérite aussi d'être signalée. Cette distorsion peut entraîner une perte de précision pour les cases de données renfermant des chiffres peu élevés.

Les utilisateurs devraient, lors de l'agrégation des données arrondies, être conscients de cette distorsion. Les erreurs dues à l'arrondissement ont tendance à s'annuler lorsque les chiffres contenus dans les cases sont agrégés de nouveau. Cependant, il est possible de réduire les distorsions en intégrant dans la mesure du possible les totaux partiels appropriés dans les totalisations.

Les utilisateurs désirant obtenir un maximum de précision peuvent aussi choisir de demander des totalisations personnalisées. Dans le cas de produits personnalisés, l'agrégation se fait à partir des enregistrements dans la base de données du recensement se rapportant aux particuliers. L'arrondissement aléatoire a lieu uniquement après que les cases de données ont été agrégées, ce qui réduit la distorsion au minimum.

Outre l'arrondissement aléatoire, on a adopté d'autres techniques, comme la **suppression des régions**, afin d'assurer encore mieux la confidentialité des réponses des particuliers.

Dans le cadre de la **suppression des régions**, toutes les données caractéristiques se rapportant aux régions géographiques dont la population est inférieure à une taille donnée sont supprimées. L'importance de la suppression est fonction des facteurs suivants :

- si les données sont totalisées à partir d'une base de données intégrales, la suppression est fondée sur la population totale;
- si les données sont totalisées à partir d'une base de données-échantillon, la suppression est fondée sur la population excluant les pensionnaires d'établissements institutionnels;
- si les données renferment une répartition du revenu, on supprime les données relatives aux régions dont la population est inférieure à 250 personnes;
- si les données ne renferment **aucune** répartition du revenu, on supprime les données relatives aux régions dont la population est inférieure à 40 personnes.

Dans tous les cas, les données supprimées sont incluses dans les totaux ou totaux partiels du niveau d'agrégation supérieur approprié.

Cette technique est appliquée à tous les produits renfermant des données infraprovinciales (c.-à-d. la série des Profils, les tableaux sommaires de base, les produits personnalisés et semi-personnalisés), qu'il s'agisse de données intégrales ou de données-échantillon.

Échantillonnage et pondération

Les données du recensement de 1991 sont soit des données intégrales (c.-à-d. recueillies auprès de l'ensemble des ménages), soit des données-échantillon (c.-à-d. recueillies

auprès d'un échantillon aléatoire de ménages) que l'on a pondérées pour obtenir des estimations pour l'ensemble de la population. Les données du présent rapport ont été recueillies auprès d'un échantillon de 20 % et pondérées pour compenser pour l'échantillonnage. Tous les en-têtes de tableaux sont annotés en conséquence. On notera que, dans la plupart des réserves indiennes et les régions éloignées, toutes les données ont été recueillies auprès de l'ensemble de la population.

Il est possible que, pour une région géographique donnée, le total ou le total partiel pondéré de la population, des ménages, des logements ou des familles diffère du chiffre correspondant figurant dans les publications contenant des données intégrales. Ces variations (en plus de l'effet de l'arrondissement aléatoire) sont attribuables à l'échantillonnage.

Notes spéciales

Chiffres de population basés sur la résidence habituelle

Les chiffres de population présentés ici pour les différentes régions géographiques indiquent le nombre de Canadiens qui y ont leur lieu habituel de résidence, sans égard au lieu où ils se trouvaient le jour du recensement. Sont également comptés les Canadiens séjournant dans un logement de la région en cause le jour du recensement et n'ayant pas de lieu habituel de résidence ailleurs au Canada, de même que ceux qui sont considérés comme des «résidents non permanents» (voir le nota au sujet de ce groupe). Dans la plupart des régions, il n'y a guère de différence entre le nombre de résidents habituels et le nombre de personnes séjournant dans la région le jour du recensement. Toutefois, dans certains endroits, comme les lieux de villégiature et les régions où sont situés des camps de chantier importants, la différence entre ces deux chiffres peut être importante.

Réserves indiennes et établissements indiens partiellement dénombrés

Lors du recensement de 1991, le dénombrement n'a pas été autorisé sur certaines réserves indiennes et établissements indiens ou a été interrompu avant d'être mené à terme. De plus, certaines réserves indiennes et établissements indiens ont été dénombrés tardivement ou la qualité des données recueillies a été jugée insuffisante. Ces régions géographiques (un total de 78) sont appelées réserves indiennes et établissements indiens partiellement dénombrés.

Les données de 1991 ne sont pas disponibles pour les réserves indiennes et les établissements indiens partiellement dénombrés et ne sont pas comprises dans les totalisations. Les données sur les régions géographiques ayant une ou plusieurs de ces réserves ou établissements font donc l'objet d'un nota approprié. En raison des données manquantes, les utilisateurs doivent prendre note que les comparaisons (p. ex., des variations en pourcentage) entre 1986 et 1991 ne sont pas exactes pour les régions géographiques en cause. L'effet des données manquantes est très faible pour les régions géographiques de niveau plus élevé (Canada, provinces,

régions métropolitaines de recensement et agglomérations de recensement) mais peut être plus important pour les petites régions où les réserves et établissements indiens en cause représentent une proportion plus grande de la population.

Une liste des réserves indiennes et établissements indiens partiellement dénombrés en cause ainsi que les chiffres de la population et des logements privés occupés des deux derniers recensements (si les données sont disponibles) a été dressée et est présentée à l'annexe 1.

Résidents non permanents

Pour la première fois en 1991, le recensement de la population inclut à la fois les résidents permanents et les résidents non permanents. Les résidents non permanents comprennent les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié.

Lors des recensements antérieurs, seuls les résidents permanents du Canada étaient inclus dans le recensement (exception faite pour 1941). Les résidents non permanents étaient considérés comme des résidents étrangers et n'étaient pas dénombrés.

Présentement au Canada, les résidents non permanents forment un segment croissant de la population. Leur présence peut avoir une influence sur la demande de services gouvernementaux tels que les soins de santé, l'éducation et les programmes d'emploi. L'inclusion des résidents non permanents au recensement de 1991 facilitera aussi la comparaison avec les statistiques provinciales et territoriales (mariages, divorces, naissances et décès) qui incluent cette population. En outre, la définition du recensement permet maintenant de mieux refléter la recommandation des Nations Unies, à savoir que les résidents à long terme (personnes demeurant dans un pays pour un an ou plus) soient dénombrés.

Le total des chiffres de population, de même que ceux de toutes les variables du questionnaire, seront touchés par ce changement à l'univers du recensement de 1991. D'après les résultats du recensement de 1991, il y avait 223 410 résidents non permanents au Canada, ce qui représente un peu moins de 1 % de la population totale. Les utilisateurs doivent faire preuve d'une très grande prudence lorsqu'ils comparent des données de 1991 avec celles de recensements antérieurs pour des régions géographiques où la concentration de résidents non permanents est importante. Celles-ci comprennent les principales régions métropolitaines de l'Ontario, de la Colombie-Britannique et du Québec. La répartition de la population des résidents non permanents pour les provinces, les territoires et les régions métropolitaines de recensement est présentée à l'annexe 2.

Même si tous les efforts possibles ont été déployés pour dénombrer les résidents non permanents, le dénombrement de cette population n'est pas aussi complet que celui des résidents permanents. Des facteurs tels que les problèmes linguistiques et la réticence à remplir un formulaire du gouvernement ou de comprendre l'utilité de leur participation peuvent avoir influé sur le dénombrement des résidents non permanents et s'être traduits par un sous-dénombrement.

Profession

Les problèmes mineurs suivants ayant trait à la qualité des données devraient être pris en considération lors de l'utilisation de la présente publication.

Directeurs généraux et autres cadres supérieurs (1130): Le groupe de base «Directeurs généraux et autres cadres supérieurs (1130)» ne devrait pas être interprété comme étant exclusivement des directeurs généraux ou des directeurs d'une entreprise. Ces personnes sont codées dans cette catégorie, alors que d'autres répondants, qui se considèrent comme étant des directeurs généraux, ont eux aussi été assignés ce code. Le terme «directeur» est utilisé de plus en plus sur le marché du travail et les personnes concernées peuvent être chargées de multiples responsabilités. Leurs réponses au questionnaire du recensement sont très généralisées, ce qui est dû à la nature variée de leurs tâches. On suggère d'utiliser les données du revenu d'emploi avec celles sur la profession comme guide en ce qui concerne les cadres supérieurs.

Directeurs d'exploitations agricoles (1146): Les personnes de ce groupe de base gèrent, pour un employeur et contre rémunération, des exploitations agricoles ou des terres affermées. La plupart des exploitants agricoles qui travaillent contre traitement ou rémunération ou qui sont travailleurs indépendants dans des entreprises constituées en société ne se déclarent pas directeurs d'exploitations agricoles dans le questionnaire du recensement. Ceux-ci sont initialement codés dans «Agriculture» puis se voient subséquemment réassigner le code 1146 durant le dépouillement. Les utilisateurs intéressés aux données de l'agriculture devraient porter attention au fait que la majorité des personnes portant le code 1146 sont celles qui se considèrent elles-mêmes des exploitants agricoles.

Exploitants agricoles (7111): Les données attribuées au groupe de base (7111), Exploitants agricoles, représentent un groupement des éleveurs (7113), des exploitants de cultures de plein champ (7115) et des exploitants agricoles, n.c.a. (7119). Ces trois codes d'exploitants agricoles ont été supprimés à la suite de difficultés rencontrées dans le cadre du codage de réponses imprécises. De plus, les exploitants agricoles, que ce soient des éleveurs, des exploitants de cultures de plein champ ou une combinaison des deux, peuvent rapporter, dans leurs principales activités, des tâches associées à la culture du sol (c.-à-d. ensemencement et plantation, etc.) à cause de la période de référence du recensement qui est la dernière semaine de mai.

Travailleurs agricoles (7183, 7185, 7199): Les données attribuées aux travailleurs agricoles devraient être utilisées avec prudence. La dernière semaine de mai, en 1986 et en 1991, était la période de référence pour le recensement. Les travailleurs agricoles, dont les activités peuvent être l'élevage, la culture ou une combinaison des deux, seront principalement occupés en cette période à la semence, à la plantation ou autre tâche reliée au travail de la terre. Les activités les plus rapportées sur les questionnaires du recensement laissent supposer, conséquemment, que ces personnes seraient des cultivateurs. Les ouvriers agricoles de cultures de plein champ (7185) pourraient être surestimés, principalement au dépens des ouvriers agricoles de l'élevage (7183) et autres travailleurs en agriculture, en horticulture et en élevage, n.c.a. (7199).

Tailleurs et couturiers (8553) et Opérateurs de machines à coudre (8563): Dans le sous-groupe 855-856, professions reliées au travail du textile, de la fourrure et du cuir, il y a confusion pour ce qui est du codage des tailleurs et des couturiers (8553) et des opérateurs de machines à coudre (8563), et ce, particulièrement dans la province de Québec. Conséquemment, le nombre de tailleurs et de couturiers est très élevé et ce, au dépens des opérateurs de machines à coudre.

Comparaison des estimations du revenu aux chiffres tirés des comptes nationaux

On a évalué les estimations du recensement sur le revenu en les comparant aux estimations du revenu des particuliers qui avaient été calculées aux fins des comptes nationaux. Après avoir ajusté les estimations du revenu des particuliers pour tenir compte des concepts et de la couverture, on a constaté que, dans l'ensemble, les estimations du recensement sur le revenu agrégé en 1990, provenant de sources semblables, étaient à un peu plus de 92 % des estimations similaires des comptes nationaux. Les différences d'estimations entre le recensement et les comptes nationaux pour les salaires et traitements ainsi que pour les revenus d'un travail autonome non agricole sont négligeables tandis que les revenus d'un travail autonome agricole semblent être surestimés au recensement par environ 4 %. Globalement, les estimations du revenu total d'emploi au recensement diffèrent de très peu en comparaison des estimations des comptes nationaux.

Pour plus de détails, voir le Rapport technique du recensement de 1991 pour la variable revenu, n° 92-340F au catalogue.

Centres régionaux de consultation

Les centres régionaux de consultation de Statistique Canada offrent une gamme complète des produits et services du recensement. On y trouve une bibliothèque et un comptoir de vente où les utilisateurs peuvent consulter ou acheter les différents produits, dont les publications, les disquettes de micro-ordinateurs, les microfiches et les cartes.

Le personnel des centres régionaux de consultation fournit des services de consultation et de recherche en plus du service après-vente, y compris des séminaires et des ateliers sur l'utilisation des données de Statistique Canada.

Chaque centre vous offre la possibilité d'extraire de l'information des systèmes d'extraction des données informatisés CANSIM et E-STAT de Statistique Canada. Un service de renseignements téléphonique est également disponible; ce service est gratuit pour les utilisateurs se trouvant à l'extérieur des secteurs d'appels locaux. Téléphonnez, écrivez, télécopiez ou visitez le centre régional de consultation le plus près pour de plus amples renseignements.

Autres références et services

Vous pouvez vous procurer les publications de Statistique Canada dans les centres régionaux de consultation et dans les bibliothèques de dépôt, ou vous pouvez également les commander par l'entremise de votre **librairie** ou de votre **agent d'abonnement**. Pour obtenir une liste des points de vente au Canada, communiquez avec le centre régional de consultation le plus près, ou consultez le Catalogue du recensement de 1991 (n° 92-302F au catalogue).

Les distributeurs secondaires présentent à leurs clients des possibilités d'accès aux données et un soutien aux analyses grâce à une diversité de services de consultation et de services informatisés que n'offre pas Statistique Canada. Vous pouvez obtenir les noms et adresses des distributeurs autorisés dans un centre régional de consultation.

Statistique Canada offre des **produits géographiques numériques** qui permettent la manipulation informatique des données géographiques. Un service d'extraction des données personnalisé permet aux utilisateurs de délimiter eux-mêmes, s'ils le désirent, la région géographique qu'ils veulent étudier. La gamme de fichiers d'extraction des données et de services offre une grande flexibilité dans la sélection d'une base géographique.

Vous trouverez dans le Catalogue du recensement de 1991 (n° 92-302F au catalogue), la description complète des fichiers numériques et des services.

On peut obtenir des renseignements sur les **produits et services du recensement de l'agriculture** en consultant la publication Produits et services du recensement de l'agriculture de 1991, n° 92-303 au catalogue, ou en téléphonant sans frais au 1-800-465-1991.

Les utilisateurs qui ont besoin de données spéciales peuvent demander les **services des enquêtes postcensitaires**. Les données sont présentées sur disquettes pour micro-ordinateur pouvant être utilisées avec un programme de calcul de tableaux financiers ou sur support papier. Pour de plus amples renseignements, communiquez avec le centre régional de consultation le plus près.

La Division de la diffusion informatique des données (DDID) est responsable du CANSIM qui consiste en un réseau de bases de données informatisées et un service d'extraction des données de Statistique Canada. Les utilisateurs ont accès aux statistiques actuelles et historiques de diverses façons, notamment grâce aux progiciels spécialisés de manipulation et d'analyse des données, aux ressources graphiques et au service de recherche bibliographique. Pour de plus amples renseignements sur le CANSIM, communiquez avec un centre régional de consultation.

Notes, Footnotes and Abbreviations

Note(s)

Comparison of the 1991 Census data with data from earlier censuses is affected by a change in the definition of the 1991 Census population. Persons in Canada on student authorizations, employment authorizations, Minister's permits, and as refugee claimants were enumerated in the 1991 Census but not in previous censuses. These persons are referred to as non-permanent residents. For further information, see the "Special Notes" section.

.. Figures not available.

... Figures not appropriate or not applicable.

– Nil or zero.

XXX Figures suppressed to protect confidentiality.

† Excludes Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For further information, see the "Special Notes" section.

¶ Incompletely enumerated Indian reserve or Indian settlement. For further information, see the "Special Notes" section.

For additional information concerning the data, see the "Special Notes" section.

Occupation data for 1986 and 1991 are based on the 1980 Standard Occupational Classification.

See Appendix "3" for occupation descriptions.

Table 1: Occupations with less than 250 males or females are not shown separately but suppressed data are included in the relevant totals. If the total number of persons in an occupation group is less than 250 in both 1985 and 1990, the entire row is omitted.

Footnote(s)

(1) Worked 49-52 weeks in the reference year, mostly full time.

(2) Designates computer assignment of the "not stated" to occupation minor groups on the basis of selected socio-economic characteristics.

(3) See "Occupation" in the "Special Notes" section.

Nota, Renvois et Abréviations

Nota

La comparaison des données du recensement de 1991 avec celles des recensements précédents est affectée par la modification apportée à la définition de la population du recensement de 1991. Les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié ont été dénombrés au recensement de 1991, mais ne l'ont pas été aux recensements antérieurs. Ces personnes sont des résidents non permanents. Pour plus de renseignements, voir la section «Notes spéciales».

.. Nombres non disponibles.

... N'ayant pas lieu de figurer.

– Néant ou zéro.

XXX Nombres supprimés afin de protéger la confidentialité.

† Ne comprend pas les données du recensement pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour plus de renseignements, voir la section «Notes spéciales».

¶ Réserve indienne ou établissement indien partiellement dénombré. Pour plus de renseignements, voir la section «Notes spéciales».

Pour obtenir plus de renseignements concernant les données, voir la section «Notes spéciales».

Les données de 1986 et 1991 sur la profession sont basées sur la Classification type des professions de 1980.

Voir l'annexe «3» pour la description des professions.

Tableau 1: Les professions comprenant moins de 250 hommes ou femmes ne paraissent pas séparément, mais les données supprimées sont comprises dans les totaux pertinents. Si le nombre total de personnes dans un groupe de professions est inférieur à 250 pour les deux années (1985 et 1990), toute la rangée est alors omise.

Renvoi(s)

(1) A travaillé 49-52 semaines durant l'année de référence, surtout à plein temps.

(2) Désigne les assignations par ordinateur des catégories «non déclarées» aux sous-groupes des professions selon certaines caractéristiques socio-économiques.

(3) Voir «Profession» dans la section «Notes spéciales».

Abbreviation(s)

Invest in Information

Earnings and incomes of individuals, families and households from the 1991 and earlier censuses can give you the edge you need for successful decision-making.

Investissez dans l'information

Les gains et le revenu des particuliers, des familles et des ménages, données tirées du Recensement de 1991 et de recensements antérieurs, pourraient vous aider à trancher judicieusement vos décisions.

The image displays a variety of Statistics Canada publications and a diskette. On the left, several printed reports are stacked, including 'Selected Income Statistics' (Certaines statistiques du revenu), 'Employment Income by Occupation' (Revenu d'emploi selon la profession), and 'Income Trends, 1970-1990' (Tendances au niveau du revenu, 1970-1990). In the center, a 5.25-inch floppy diskette is shown with a label that reads 'Census Recensement 91' and lists 'Basic' (Tableaux), 'Summary' (Sommaires), and 'Tabulations de base'. To the right, more printed reports are visible, such as 'High and Low Earners' (Personnes à revenu très élevé et à revenu très faible), 'Characteristics of Low Income Population and Families' (Caractéristiques de la population et des familles à faible revenu), and 'Income Profile of Families and Households' (Profil du revenu des familles et des ménages). At the bottom of the collection, three large printed reports are prominently displayed, all featuring a large '91' and the title 'Census Recensement'. The entire collection is presented within a frame that has 'Diskette/disquettes' at the top and 'Print/imprimés' at the bottom.
